

Budget Arbor & Logging, LLC

Located in Spokane, Washington

TPM Member since March 2018

For over 25 years, Budget Arbor and Logging, LLC has served the Inland Northwest with arbor services. The well trained crew has over 100 years of combined experience in the tree service industry. Budget Arbor has the crew and equipment needed to do the tough jobs with expert precision.

Budget Arbor works with utility companies to work safely around power lines, especially critical in residential areas. The company specializes in close quarter and dangerous tree removal. The team is highly skilled in removing trees that are close to dwellings and other obstacles with minimal impact to surrounding areas. The expertise Budget Arbor provides minimizes the risk to home or property.

What a job! Don't all little boys want to grow up to climb trees? Fred, what are you doing in that tree?

Working on tall trees demands all of the Safety procedures and first rate planning.

Part of Budget Arbor's work is called residential/urban logging. Backyard logging refers to the harvesting and utilization of trees in urban areas. Clients can keep their logs for firewood or other uses. But there are other options as well. Depending on market conditions, the quality, and age of the log, Budget Arbor may be able to secure the sale of the log to help mitigate the costs of tree removal. Not all trees and species are worth the same price or have the same marketability. Budget Arbor tree service experts provide free written estimates to municipal, residential and commercial customers and will discuss all possibilities with the customer.

Budget Arbor also provides professional stump grinding. Grinding stumps removes the safety hazard of an exposed stump and eliminates an unsightly feature to the landscape. Stump grinding has far less impact to the surrounding areas than digging the stump up. Stump grindings make excellent mulch after composted. Complete cleanup of the stump grindings is available upon request. However, this mulch can be used to improve the health of plants in existing flower beds.

“Proper pruning is one of the best things you can do to help keep a tree healthy. Conversely, bad pruning is one of the worst things that you can do to a tree.”

The Hillier Gardener's Guide to Trees and Shrubs

SERVICE TO CONSIDER

This tree is precariously leaning over the property. The Budget Arbor team is making short work of it. If you look closely at the lowest of the remaining branches you can see the tiny figure of the worker.

Whether a client wants to clear cut all or a portion of their property, enhance views by selectively removing trees, fireproof the property, thin out existing trees to leave a “natural” look yet make the property more manageable, create trails, pathways, driveways, or roadways, Budget Arbor’s goal is to assist the client in making their property more enjoyable, functional, and safe! The company can also provide a portable sawmill to turn the client’s logs into lumber on site.

Storm damage can cause havoc with trees. Budget Arbor provides professional clean up services. The company has a fully contained system for chipping limbs as well as the removal of all downed timber from the client’s property. With the addition of stump grinding, your landscape can be back to beautiful in a short time. The company provides 24 hour 7 day a week emergency service. Client safety and the health of trees is very important to Budget Arbor.

FALL

- **In the fall**, trees enter their dormant phase which does not mean they become inactive; they just slow down their natural processes. Once their leaves have fallen off, it becomes easier to see and therefore evaluate the overall structure and health of a tree. That makes it a great time to call an arborist to formulate a plan for the tree’s care, as well as, schedule any necessary corrective or aesthetic pruning. This is a good time of the year to also consider deadwooding and developing a fire prevention plan for your property.

SPRING

- **Springtime** is another great opportunity to evaluate a tree’s overall health and structure and formulate plans for the optimum health of the tree. It’s another ideal time to prune. Consulting an arborist will ensure your tree gets the best possible start to its new growing season and will help ward off future problems that would have to be corrected later in the year.

PRUNING & THINNING

- **Pruning and thinning** of a tree or shrub is something that can be done to allow for better views on an existing property, or to create a healthier looking plant. If you have a view that is being blocked by a tree or shrub, but don’t want to remove the plant, allow our highly trained employees to thin and prune the specimen to give you the best of both worlds. You may also choose, or if the health of the tree or shrub dictates, removal of the specimen as well. Often times an unsightly tree or shrub can be salvaged and made to be much more aesthetically pleasing with proper, skillful pruning.

FIRE PREVENTION

- Creating a zone around your home where vegetation has been modified to reduce the threat of wildfire can be done in two steps. 1) Clearing any and all dead vegetation. 2) Removing and thinning of all dense vegetation and ladder fuels.

Dropping the tree one small piece at a time.
